1. Introduction

RemindIt is a very advanced app for managing of all your events and activities.
To maintain your events and activities just create reminders for them.
Later on, when reminders are "in time" or “overdue”, the local notifications will be sent to you:

1) A ring tone will be played.
2) The local notification information will be shown.
3) The number of "in time" or “overdue” reminders will appear as an app icon badge – a small number in the

upper right corner of the app icon.

The app might be used for:

1) Notifications about private or business events.
2) Dispensing of medicines.
3) Time management.
4) Scheduling.
5) Tracking of event completion, by recording notes for every completed event or activity.

All reminders when they are "in time" or “overdue” need to be marked as “completed” or removed, otherwise a new

notification will be resent. Marking as “completed” might be performed by editing of the reminder status or simply by swiping of the reminder to the right. Reminders marked as done are saved in history.

App maintains five types of reminders:

1) One-time events –reminder about something what need to be done defined date and time.
2) Daily, one or couple of times per day – requiring events with repetition pattern based on days.

3) Weekly events – requiring events with repetition pattern based on weeks.
4) Monthly events – requiring events with repetition pattern based on moths.
5) Yearly events – requiring events with repetition pattern based on years.

In RemindIt app has been implemented total saving/restoration of state – it means that app might be interrupted at any time (by phone call, pressing one of device buttons, screen lock) and your data will not be lost. When app is

activated next time you will have option to get your latest data back.

App behavior can be customize by modification of settings – just press ”settings button” and adjust app parameters.

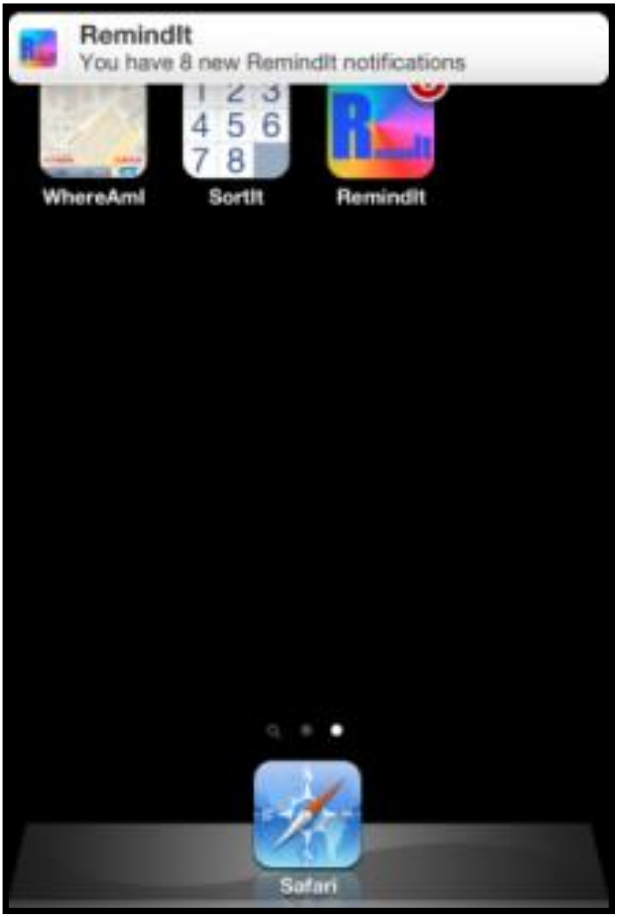
App help available in the app or on WWW contains detailed description all the app functions, services and options.
All app activities and events are recorded in the system log.

Statistics about the app usage are accumulated.

[Back to top]

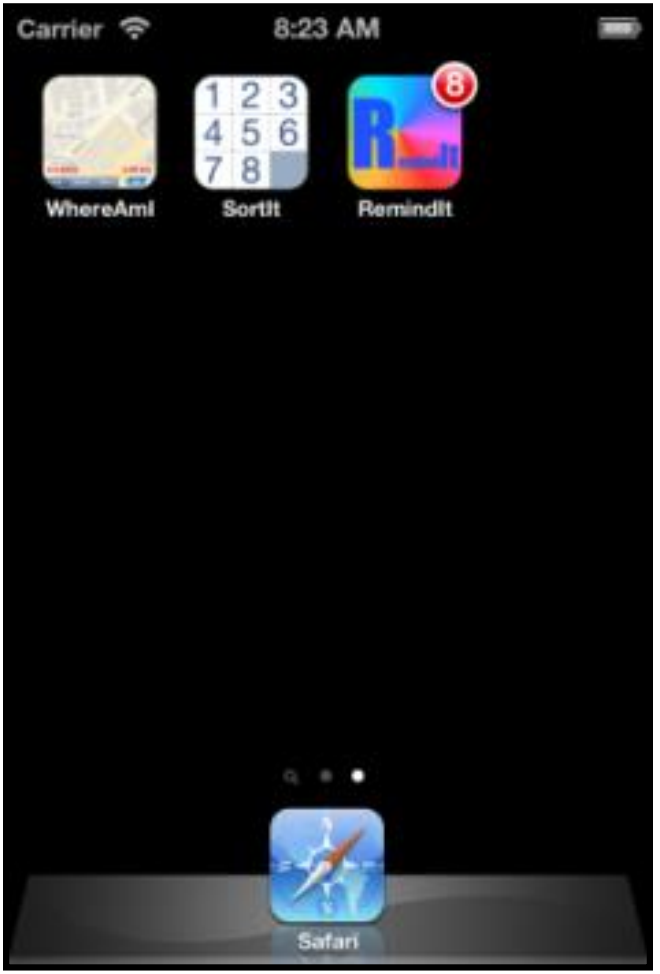
2. Local notifications

When reminder become “due” the local notification is sent to the user:



A ring tone is played. Information about reminder is shown on top of screen.

The local notification information is shown.

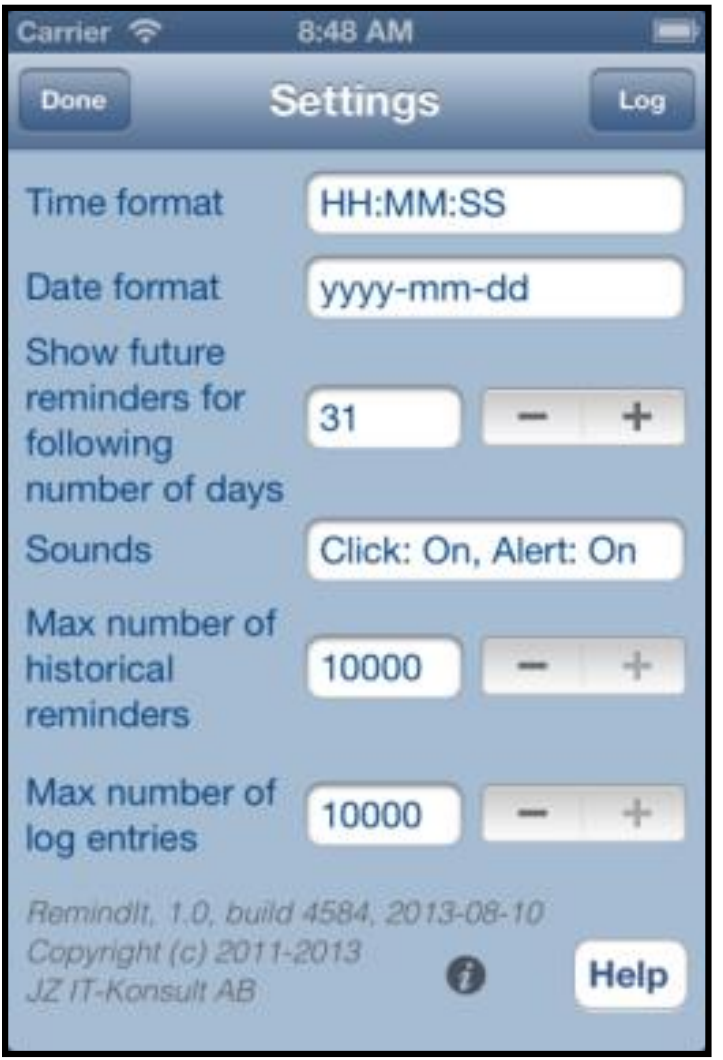


The number of "in time" or “overdue” reminders appear as an app icon badge – a small number in the upper right corner of the app icon.

[Back to top]

3. View orientation

All app view works in portrait and landscape orientation:



Portrait orientation

Landscape orientation

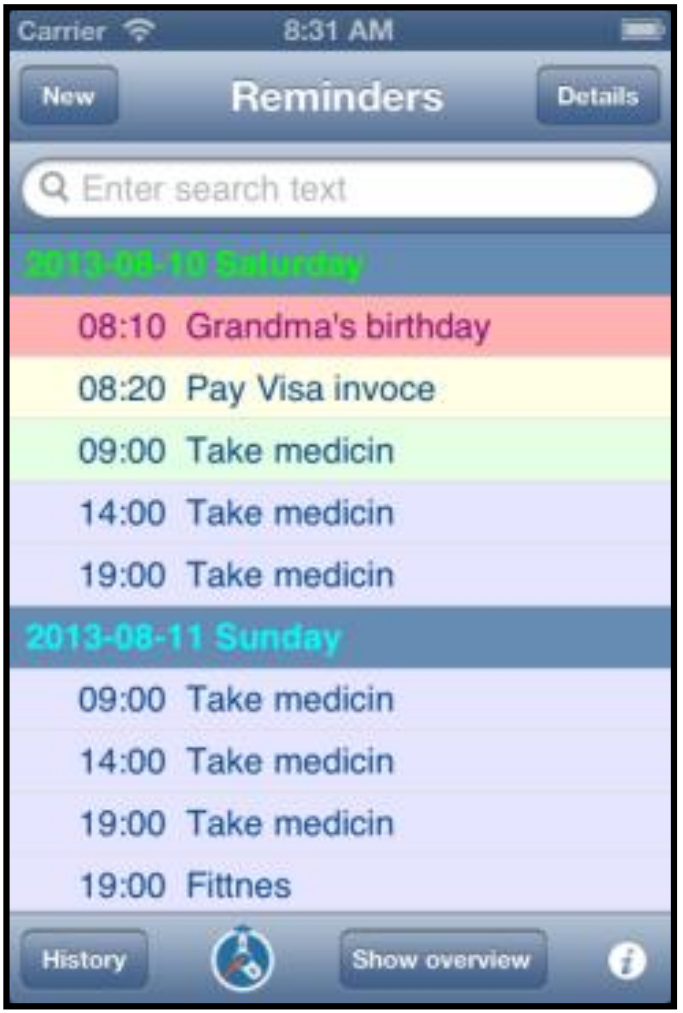
Just select orientation, which is most convenient for you. View orientation might be change at any time.

[Back to top]

4. Main view

It is view you will see when you start the app. View contains list of reminders and controls which allow you access to all app functions and options. Reminders are sorted by date and time – oldest first.

Dependent on how app was terminated last time it was used, you will see one of the following:



First time start or after terminat ion in Main view when selected reminde r fit on the ”first page of reminders in Main view.

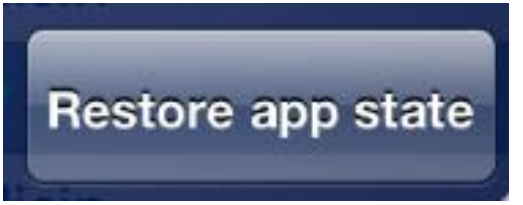
- Reminders, which were overdue for more than 20

minutes ago, are shown in red color.

- Reminders, which are overdue for less than 20 minutes are shown in yellow color.
- Remainders, which will be overdue in 20 minutes or less, are shown in green color.
- All other reminders have blue color.

Start after termination when app was not in Main view or when latest selected reminder was long time in the future (did not fit on the ”first page” of reminders in Main view).

Here when you choose ”Go to reminders” you will be directed to the beginning of reminders list and previously saved app state will be lost.

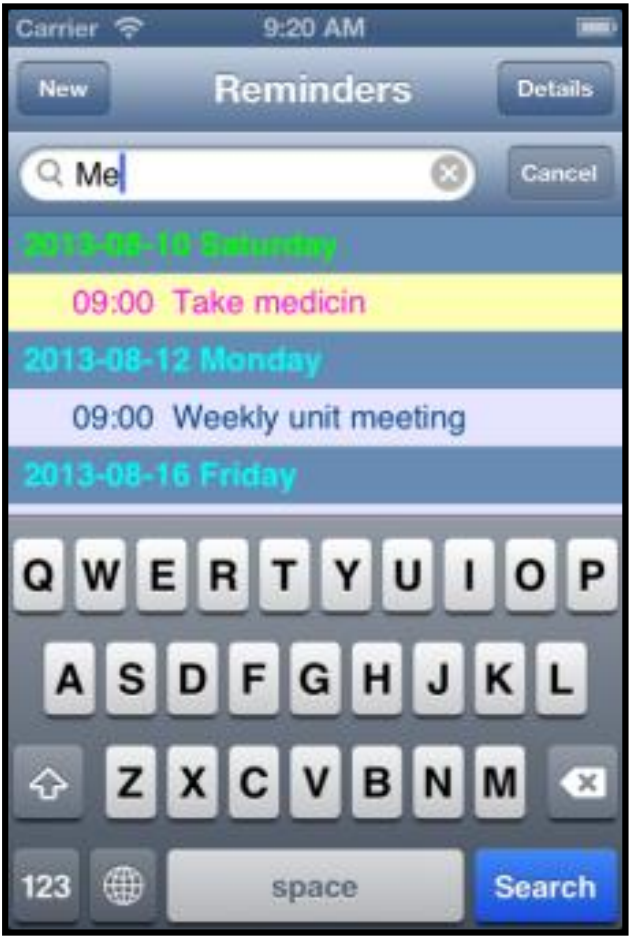


When you select ”Restore app state” you will be redirected to exactly same view as it was when you were using app last time, all not saved data will be re-entered for you.

Here is detailed description of controls available from Main view:

Search bar – used for searching ”filtering” of reminders. When activated Main view will show only reminders containing text entered in search bar.

Main view will change to:

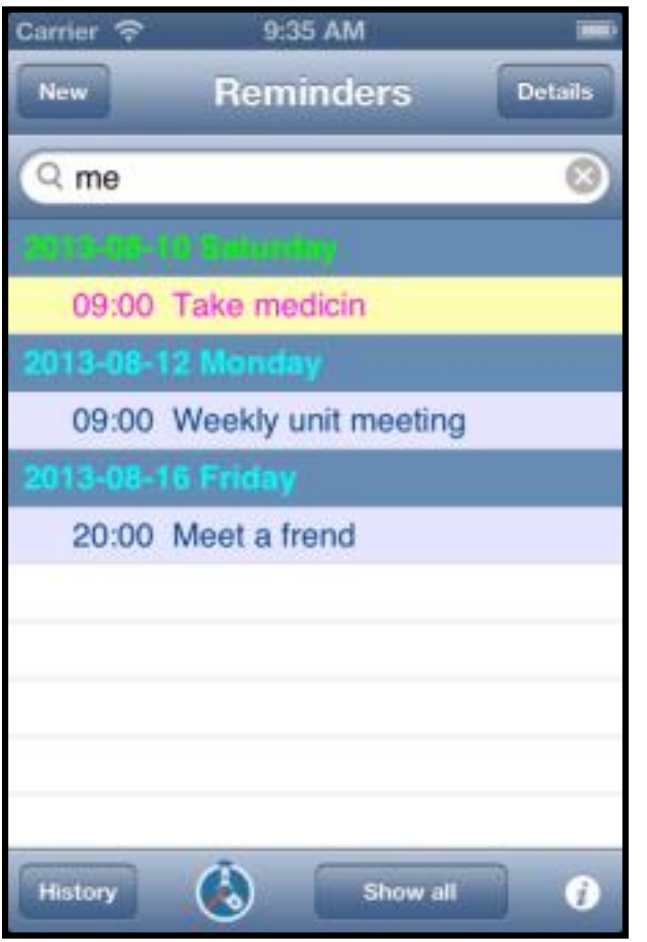


Here:

Keyboard

Search button – hides keyboard.

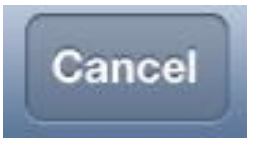
Main view will show only items, which satisfies search condition, search text stays in search bar:



Activated search bar, here:

“Me” Searched text.

Button which clears search text.



Cancel button – terminates searching, search text is cleared, keyboard is hided.

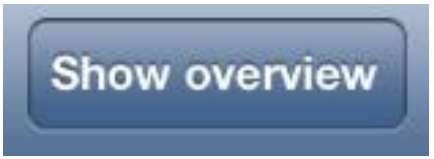
Starts Series of reminders view – view used for creation of new reminders.

Opens Details view for reminder.

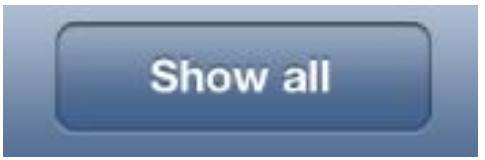
Activates History view – list of completed reminders.

"Go to next overdue reminder" buttons – the next "overdue" reminder is selected. By pressing this button couple of times you will see all "overdue" reminders.

When there is no "overdue" reminders the button is disabled:



Buttons do switching view between showing all reminders or showing overview of reminders.



Pressing on “Show overview” will switch to ”Show overview” mode, button text will change to “Show all”.

Pressing on “Show all” will switch to ”Show all” mode, button text will change to “Show overview”.

In ”Show all” mode all reminders from series are shown:

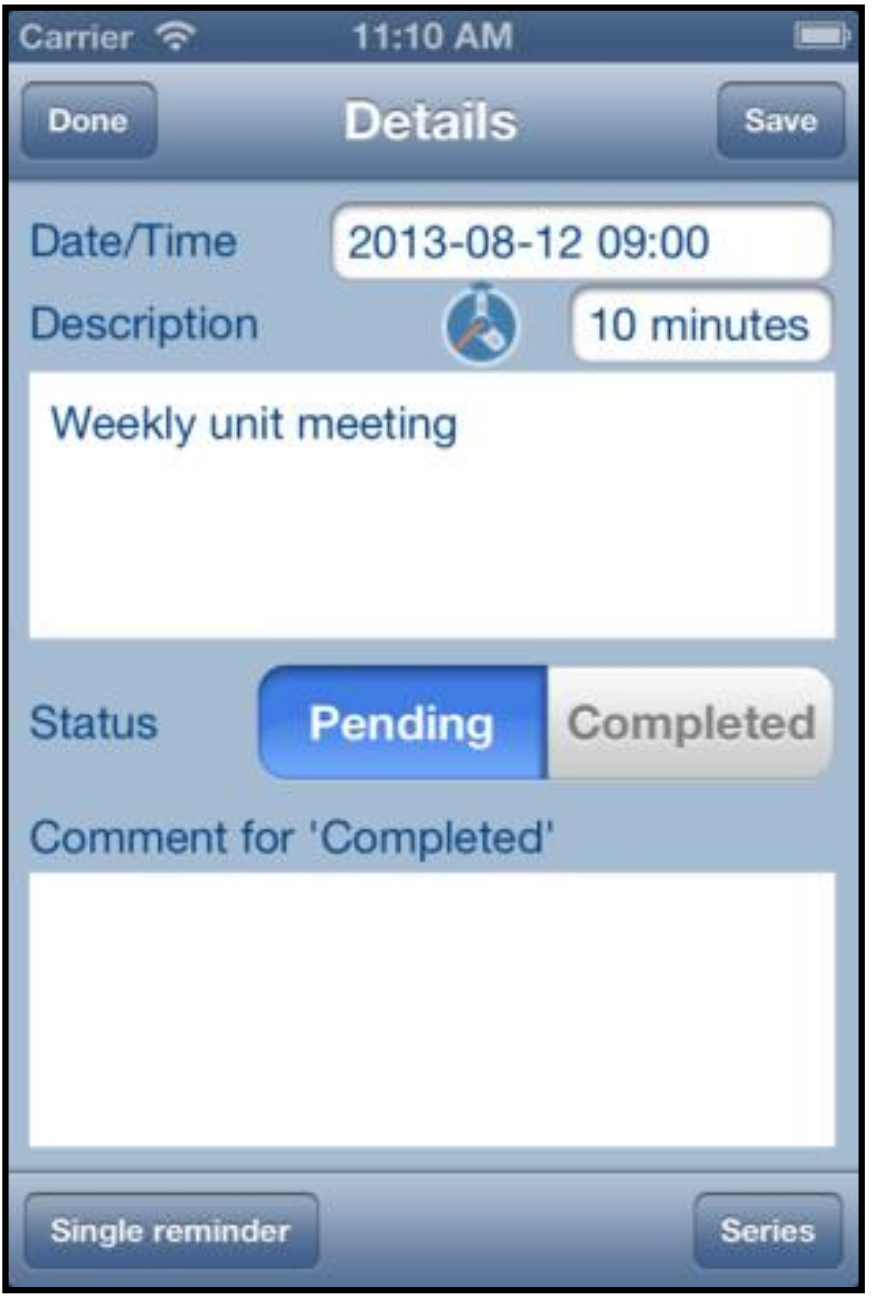
5. Reminder details view

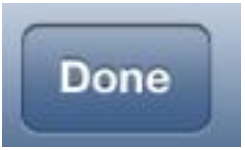


Remainder details view shows details about reminder and allows:

1) Adjust time when local notification about reminder will be sent, here you can select time from 0 minutes to 4 weeks.
2) Access single reminder of series.
3) Initialize editing of one time reminder.
4) Change status of reminder to “Completed”.

Add comment to completed reminders.

Controls in this view:



Terminate view without saving changes. Instead tapping on button you can use gesture - swipe to the right.

When changes were made user will be prompted for decision what to do, by following alert:

User will have three possibilities:

1) Save changes, and exit, by choosing “Yes”.
2) Discard changes and exit, by selecting “No”.

3) Continue editing, by selecting “Cancel”.

Terminate view and save changes

For every reminder you can select time when local notification will be sent to you.

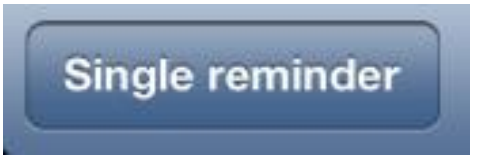
You may select time from 0 minutes to 4 weeks.

Just tap on field – and picker with all possible choices will popup.

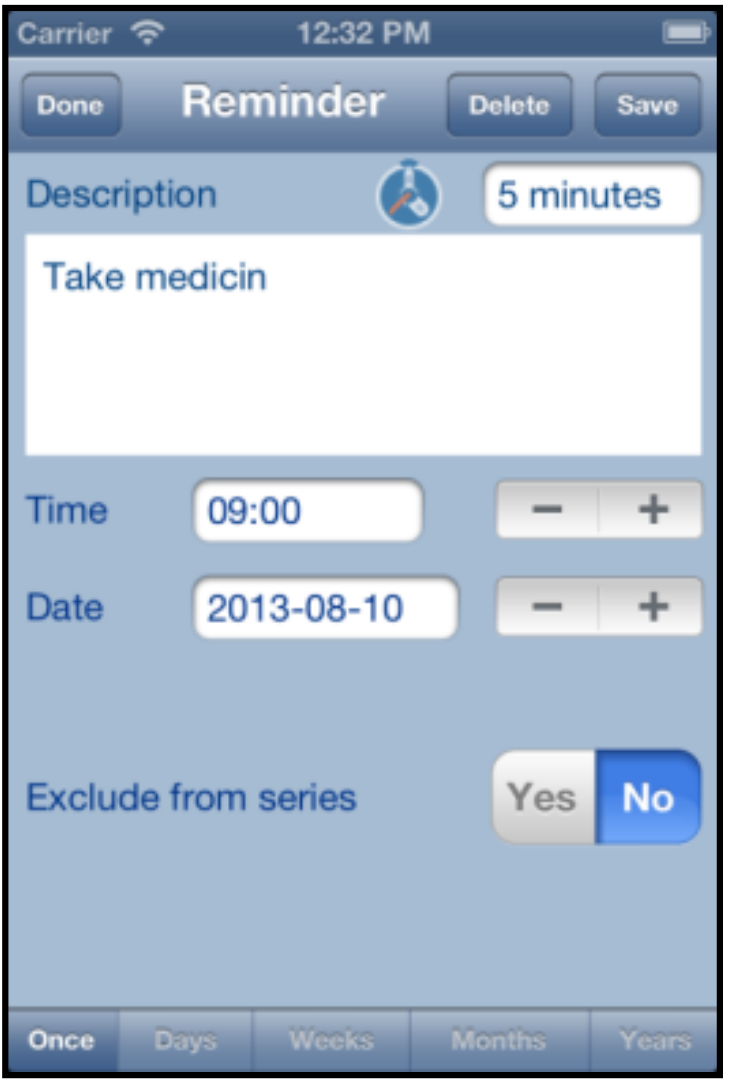
or

Use this control to changing status of reminder.

When status of remin der is changed to “Completed” it will be possible to add comment to reminder.



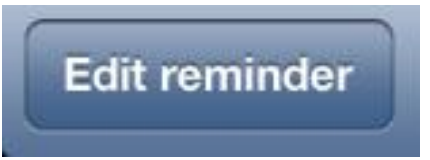
Use this control to initialize editing of reminders, which are part of series.



The Series of reminders view with reminder data will be opened.

You will have possibility to:

1) Delete reminder.
2) Exclude reminder from series.
   Select time when local notification will be sent.



Use this control to start editing of one time reminders

The Series of reminders view with reminder data will be opened.

[Back to top]

6. Series of reminders view

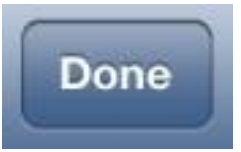
View contains five sub-views used for different types of reminders:

1) Once: one-time events – reminder about something what need to be done defined date and time.
2) Days: daily events, one or couple of times per day – requiring events with repetition pattern based on days.
3) Weeks: weekly events – requiring events with repetition pattern based on weeks.

4) Months: monthly events – requiring events with repetition pattern based on moths.
5) Years: yearly events – requiring events with repetition pattern based on years.

Sub-views of **Series of reminders view** have couple of common controls and some common information fields.

Common controls (all sub-views):



Terminate view without saving changes.

Instead tapping on button you can use gesture - swipe to the right. When changes were made user will be prompted for decision what to do, by showing following alert:

User will have three possibilities:

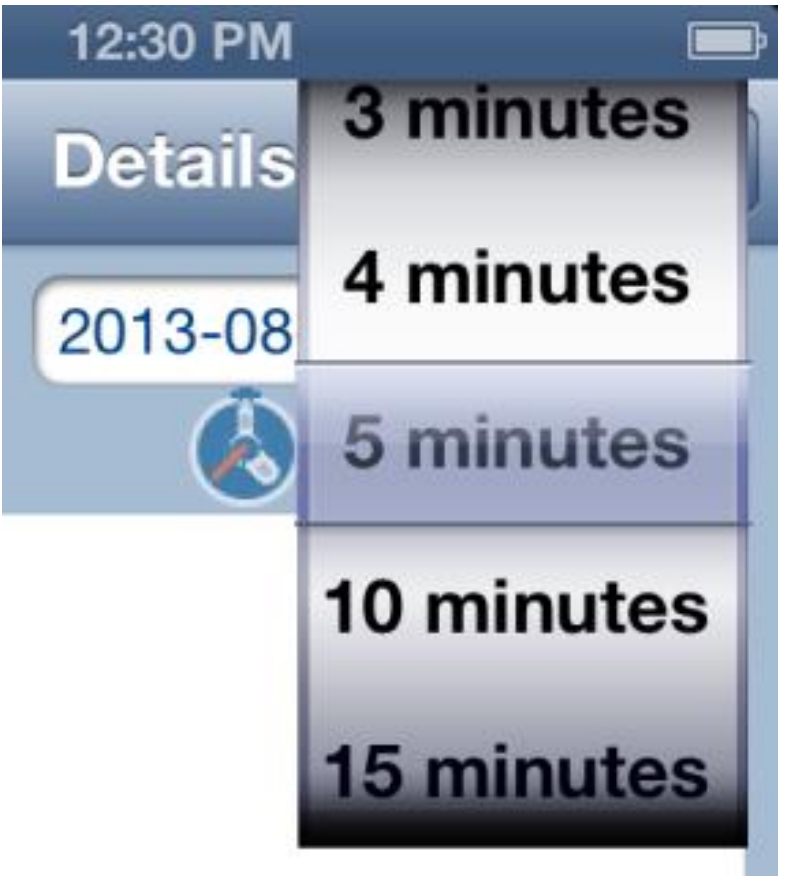
1) Save changes, and exit, by choosing “Yes”.
2) Discard changes and exit, by selecting “No”.
3) Continue editing, by selecting “Cancel”.

Terminate view and save changes

Common information fields and controls (all sub-views):

Time when local notification event will be sent. You may select time from 0

minutes to 4 weeks. Just tap on field – and picker with all possible choices will popup:



Description:

Description of reminded event. To enter description, just tap on the field, keyboard will pop-up, and you will have possibility to tape your text.

Time:

Time of reminded event.
To enter time, just tap on the field, time-picker will pop-up, and you will have possibility to select time.

Time stepper:

To make adjustments and corrections of time you may use stepper:

Tapping on (-) decreases time by one minute.
Tapping on (+) increases time by one minute.

Keeping stepper pressed cause continuous value changes.

Common information fields and controls (Days, Weeks, Months, Years):

Start date:

Start date for series of reminders – date when series of reminders starts.

To enter date, just tap on the field, date-picker will pop-up, and you will have possibility to select date.

Start date stepper:

To make adjustments and corrections of start date you may use stepper:

Tapping on (-) decreases date one day.
Tapping on (+) increases date one day.

Keeping stepper pressed cause continuous value changes.

End date:

End date for series of reminders – date when series of reminders ends.

To enter date, just tap on the field, date-picker will pop-up, and you will have possibility to select date (see Start date).

End date stepper:

To make adjustments and corrections of date you may use stepper:

- Tapping on (-) decreases date one day.
- Tapping on (+) increases date one day.
- Keeping stepper pressed cause continuous value changes.

End date ”clear” button:

Taping on this button causes removing of end date.

4) Repetition pattern based on days, like every day, every second day…
5) Repetition pattern based on hours:
    a. How many times per day.
    b. How many hours between events.
6) Start date (see Common information fields and controls).

7) Start date stepper (see Common information fields and controls).
8) End date (see Common information fields and controls).
9) End date stepper (see Common information fields and controls).
10) End date ”clear” button (see Common information fields and controls).

Controls on this sub-view:

Every <n> day:

To select repetition pattern based

on days just tap on the field, picker will pop-up and you will have possibility to choose right number.

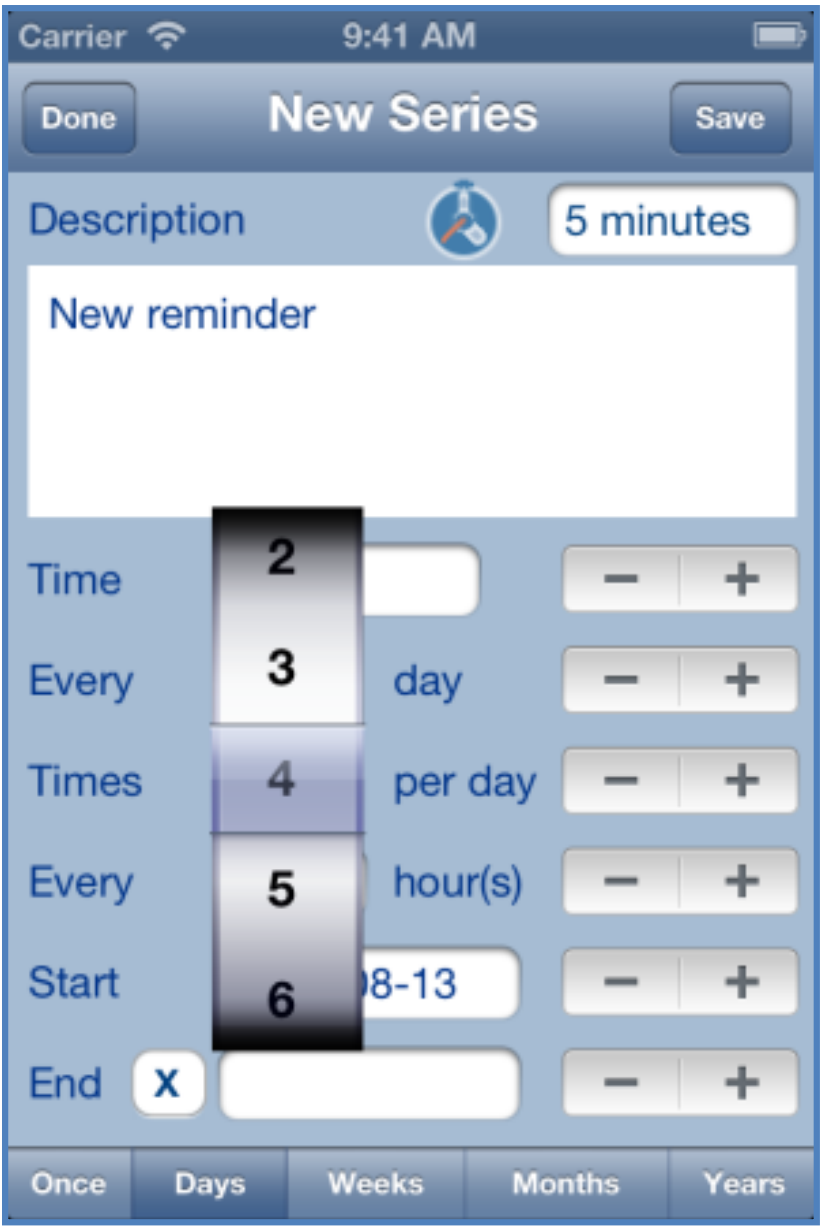
Every <n> day stepper:

To make adjustments and corrections of repetition pattern you may use stepper:

- Tapping on (-) decreases number by one day.
- Tapping on (+) increases number by one day.
- Keeping stepper pressed cause continuous value changes.

Times per day:

To select how many times per



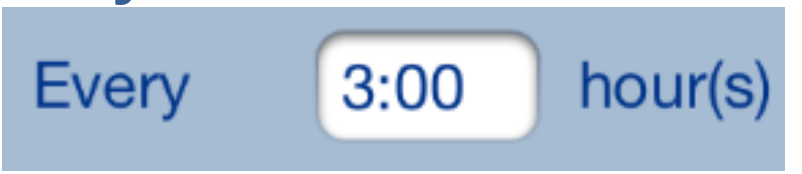
day, the reminder event should be populated just tap on field and by using of picker select required frequency.

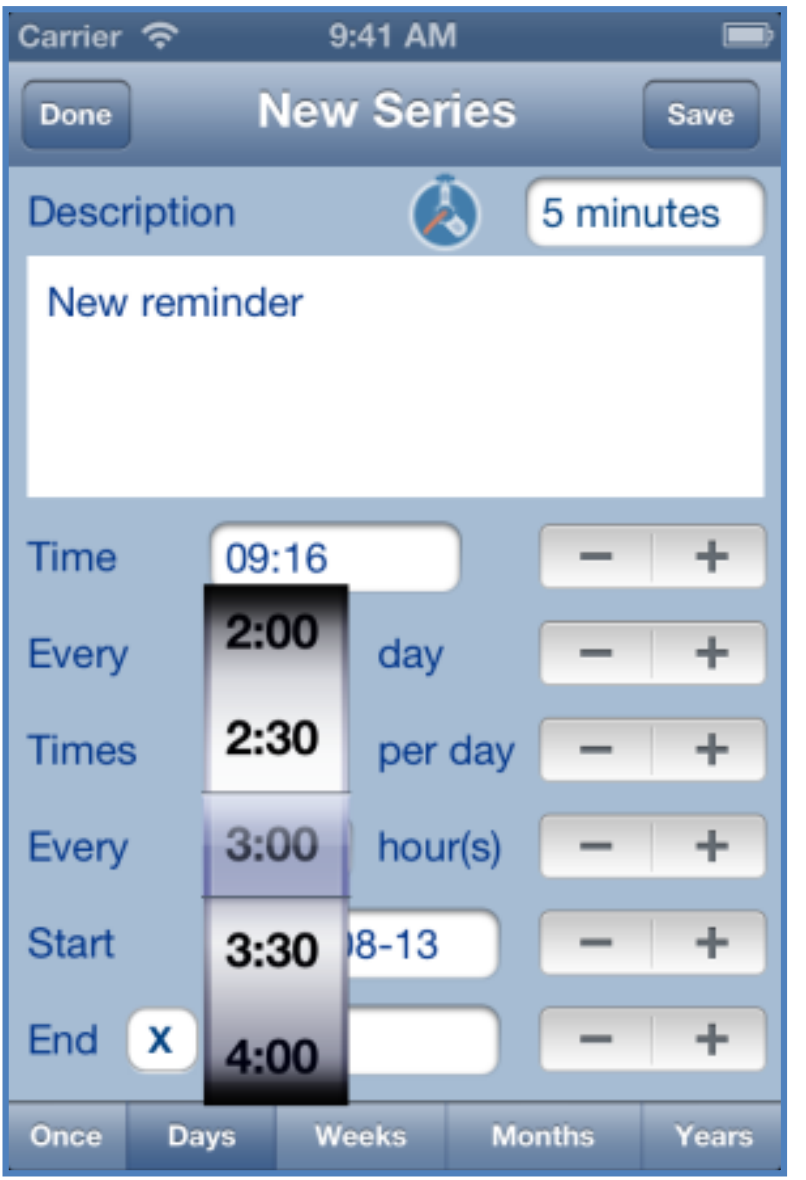
Times per day stepper:

To make adjustments and corrections of “Times per day” you may use stepper:

- Tapping on (-) decreases number by one.
- Tapping on (+) increases number by one.
- Keeping stepper pressed cause continuous value changes.

Every <n> hours:





To select time between daily repetitions of reminders, just tap on field and by using of picker select required value.

Every <n> hours stepper:

To make adjustments and corrections of time between daily repetitions of reminders you may use stepper:

- Tapping on (-) selects previous value.
- Tapping on (+) selects next value.
- Keeping stepper pressed cause continuous value changes

[Back to top]

6.3 Weeks

This sub-view is used for creation of reminders about events which are going to happen weekly, every week, every second week, every third week,…, on certain days of week – requiring events with repetition pattern based on days.

To create reminder of this type you need to supply following information:

10. Statistics view

This view just shows some statistics about usage of app:

1) Version, build information:

```
RemindIt, 1.0, build 4587, 2013-08-13
```

2) Type of device:

```
iPhone OS 6.1.3, iPhone,
Resolution: 640 x 960,
Battery level: 100.0%
```

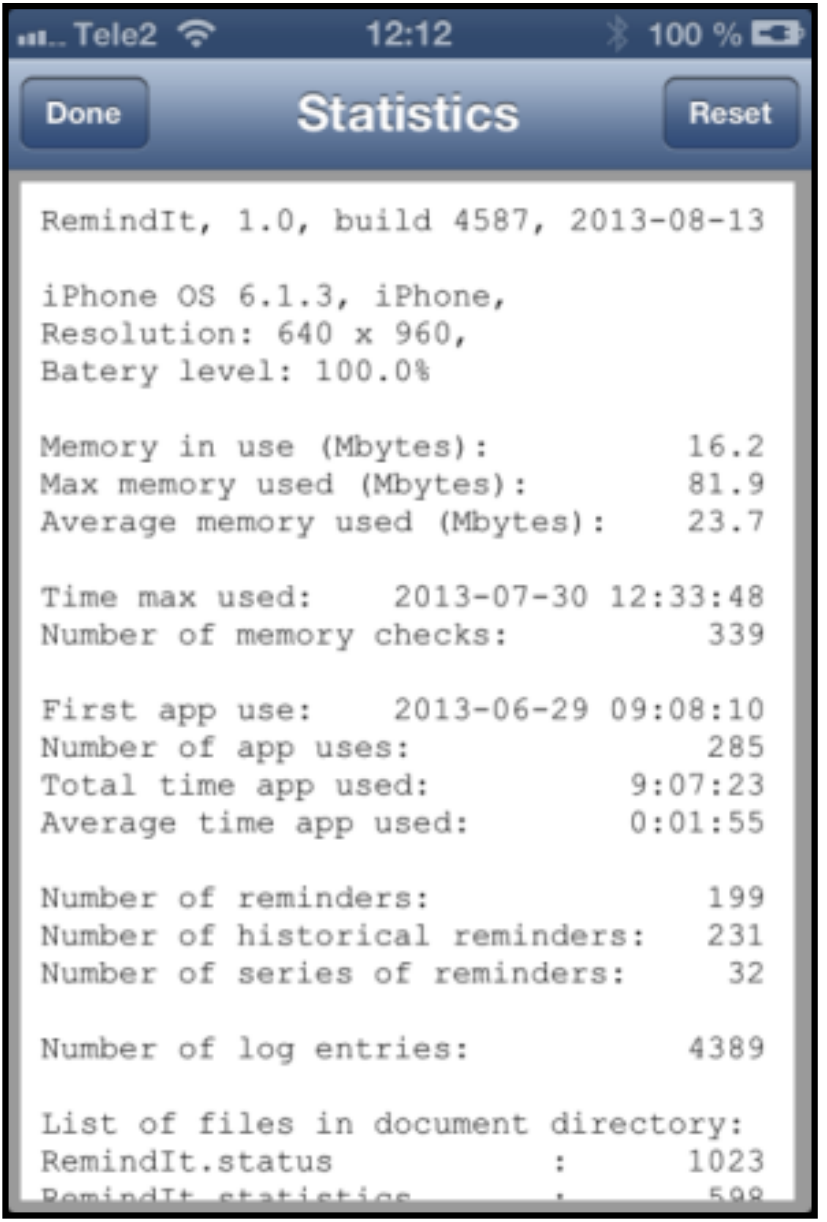
3) Memory statistics:

```
Memory in use (Mbytes):          12.0
Max memory used (Mbytes):        81.9
Average memory used (Mbytes):    23.7

Time max used:    2013-07-30 12:33:48
Number of memory checks:          338
```

4) Statistics about app usage:

```
First app use:    2013-06-29 09:08:10
Number of app uses:                284
Total time app used:           9:07:05
Average time app used:         0:01:55
```



5) App database statistics:

Number of reminders: 199
Number of historical reminders: 231

```
Number of series of reminders:     32

Number of log entries:           4384
```

6) List of app files:

```
List of files in document directory:
RemindIt.status           :       660
RemindIt.statistics       :       598
